

# Protect & Stream

## Real-time stream encryption

PROTECT & STREAM is an innovative real-time stream encryption solution over IP. Suitable for any service: video, audio, commands, etc.

## Multistream

Broadcast your feeds to all your recipients. Each stream is protected and secured thanks to INES KEY TRANSLATE. INES ensures the confidentiality and personalization of each transaction.

## Powerful DRM

PROTECT & STREAM natively integrates user access control with end-to-end encryption. A user can only access to authorized content.

## INES technology

INES is a symmetric cryptography solution based on random functions randomly distributed developed by JLMorizur Engineering. 3 security modes and 4 encryption levels. Double factor authentication and private key available.

## Features

- Real time Advanced Encryption System (AES)
- Adapted to stream mode on any type of network
- No plugin to download
- 3 security modes
- 4 levels of encryption
- Dynamic reassessment of protection conditions for each packet
- Interoperable technology

## A complete suite
