# Protect & Push

Secured data transfer

PROTECT & PUSH allows you to protect your data using INES technology, a symmetric cryptography solution, and to transfer them securely over any local or public network.

Mobile, simple and easy solution

The sender pushes his files via a web client from any device.
The recipient receives a download link by email.

Unlimited file size

Protect & Push allows you to transfer small files as well as large ones.

You need more privacy?

Protect & Push reinforces privacy with SMS double authentification (2AF) and a private key.

INES technology

INES is a symmetric cryptography solution based on random functions randomly distributed developed by JLMorizur Engineering. 3 security modes and 4 encryption levels. Double factor authentication and private key available.

Features

- File encryption
- File transfer
- 3 security modes available
- 4 levels of encryption per mode
- No plugin to download
- Address book
- Any file type
- Delivery follow up
- Traceability of operations
- Parameter : number of downloads and time to live

Technical requirements

- HTLM 5
- Advanced Encryption System
- Chrome, Firefox, Edge
- Web responsive
