Cybersecurity: JLMorizur Engineering joins Systematic Paris-Region's Cyber & Security Hub

JLMorizur Engineering (JLME) is an engineering firm, R&D center, and software publisher specializing in smart grids, cybersecurity, and telecommunications. It is also a QUALIOPI-certified training organization.

Since its creation, JLME has taken a sovereign approach to both its governance and its solutions.

Our cybersecurity activities

JLME supports its clients, particularly in the design of 24/7 infrastructures and/or security platforms incorporating AI.

Our R&D has led to the development of INES (Intelligent Network Encryption System), a polymorphic symmetric encryption algorithm based on documented mathematical foundations and enhanced by generative AI capable of handling very large keys (up to 192,000 bits to date).

About Systematic Paris-Région

A recognized European deeptech hub, Systematic has more than 900 members (startups, SMEs, large groups, and academic institutions) and supports digital players through collaborative innovation, the federation of industrial, academic, and institutional ecosystems, and project financing.

The Cyber & Security Hub is the cluster's largest, featuring programs focusing on defense, AI, and sovereign cloud computing.

A key partnership

The collaboration with Systematic is based on a philosophy of sharing and innovation. It creates opportunities to promote JLME's technologies, share its expertise, and participate in European programs and projects.

JLME contributes to the cluster's momentum through its expertise in the broadcast market and technologies, its research capabilities, and its ecosystem of experts.
